

Iowa Bridge Backwater Software, Version 1.3

The CD contains the user manual and installation files for the Iowa Bridge Backwater Software, Version 1.3.

Installation Files

To install the software go to the folder using Windows Explorer and double click on the file setup.exe to start the installation program.

Important Note

During installation some system files are installed for running visual basic.

During installation if the install program finds you have a newer version of a system file, it will ask if want to keep the newer version or replace it with the older version in the install files.

ALWAYS CHOOSE TO KEEP THE NEWER VERSION THAT ALREADY EXISTS ON YOUR SYSTEM. THE SOFTWARE WILL WORK FINE WITH AN EXISTING NEWER VERSION OF SYSTEM FILES.

Installing from the website

The program files are available on the web site in self-extracting zip files. The file is labeled PCVAL.exe. It contains three installation files. They are: Iabhv1_3.cab, setup.exe, and setup.lst.

To install the software the three installation files simply need to be in the same directory. For example, you could create a directory on your hard drive (i.e. PCVALinstall), then download the zipped files from the website to the directory. Run the zip file (double click in Windows Explorer) to extract the installation files. Then run setup.exe and the installation program will run and install the software.
